Securing Your Bike

- Lock your bike to a large immovable object that cannot be cut.
- Lock your frame, wheels, seatpost and anything else that can be easily removed.
- Seat and seatpost locks are available and only need to be installed once. The Spoke can help you with a seat lock.

Bike Locks

- Use a U-lock to attach the frame of the bike to the secured object and a cable lock to secure easily removed parts of the bike to the U-lock.
- Never use a cable lock by itself -- they’re too easy to cut.
- A thick chain lock can do all of the above.
