

THINKING IS HARD, SO LET'S DRAW AND COLOR INSTEAD

PRESENTER: DOUGLAS ORTEGO

Abstract: There is a way of drawing complicated processes and ideas using ideas from systems design and engineering that are useful and accessible to everyone. I'm suggesting running a short workshop on using this concept as a multi-tool for both teaching and learning. Within teaching, one can use this to organize the process of a curriculum and use it as a guidebook for yourself and your students to understand what is going on and how a lesson one day relates to the goals for the courses as well as external relations to other ideas and courses. For students, they can use this tool to organize their projects or help solve complicated problems. Goal & Objectives: Provide a potentially useful tool to participants to use as they will.
